

January 29, 2021

Vista Woods did surveillance COVID-19 testing today on a resident that recently was readmitted from the Hospital. That individual's test showed positive and the resident was moved immediately to an isolation area. We hope that this will be an isolated case because the resident was in quarantine since his/her return and staff are required to wear their personal protective equipment.

We continue to follow strict infection control practices and follow the directions from the local and State Departments of Public Health and the guidelines from CMS, CDC and the DIA. There will be temporary restrictions on visitation, communal dining and group activities to help prevent any further spread of the virus.

The second COVID-19 vaccination is scheduled on February 3 for our residents and staff. The first one was completed on January 13.

The support from our residents, their families and the community has been greatly appreciated by our staff who have worked diligently through this pandemic. Thank you.
