

June 28, 2022

Vista Woods remains transparent with any COVID-19 status changes within the facility and the community. Today an employee tested positive before work. That employee has not been working since he/she was exposed a few days ago. We appreciate that individual's cooperation in protecting our residents and other staff.

We will continue testing all staff and residents for an indefinite period. Staff will continue to be required to wear additional protective equipment including face shields. Everyone entering the building must be screened in and should not visit if they have any cold-like symptoms or if exposed to COVID.

Our facility works closely with Wapello County Public Health and offers us various recommendations. We also post updates on the facility's website [www.vistawoodscarecenter.com](http://www.vistawoodscarecenter.com). It is important for all of us to be careful out in the community, especially attending larger events. Being fully vaccinated, keeping a mask and hand sanitizer available is our best prevention.

Thank you for your continued support.
