October 26, 2020

Vista Woods continues to do general surveillance testing of both staff and residents for COVID-19. Today, we found two residents positive with a rapid test and are confirming those results with other tests to be sent to the State Hygienic Lab. Those residents have been placed in our isolation area and brings our total current cases to four in-house. One of those residents was recently admitted to our facility from a hospital.

The facility plans to continue testing residents and staff twice weekly for at least the next two weeks and then on-going as needed. We continue to provide, and require, our staff to wear the necessary Personal Protective Equipment (PPE) and to sanitize their hands before and after each resident contact.

Group activities and visitation will also continue to be limited to help prevent the spread of the virus. We are following the guidelines from the local and State Departments of Public Health as well as the Federal guidelines from CMS. All cases are being reported to local, State and Federal agencies.

We again express our appreciation to all the residents, their family's, and the community for their support. We ask that everyone continue to take this virus serious and help protect it from spreading here and throughout the community.
