

December 10, 2021

Today we had an employee that tested positive for COVID-19. We believe this is community acquired. We have been in contact with the local public health and the hospital who are reporting an extremely large number of positive cases in the area. The community is also seeing an uptick of multiple other respiratory illnesses which is alarming.

We continue to remind our staff to be diligent in wearing their masks and shields. Most people don't realize how many times a day they rub their eyes. It is the little things like this and sanitizing hands that can prevent us from becoming ill. Residents are also encouraged to wear their masks when out of their rooms or when having visitors. The facility will continue to test both residents and staff twice weekly.

As always, thank you for your patience and support throughout this on-going pandemic. It has been difficult times for us all. Please stay safe.
