

June 1, 2022

Vista Woods remains transparent with any COVID-19 status changes within the facility and the community. Today an employee mentioned minor symptoms at the beginning of his/her shift and tested positive. Another employee, without symptoms, also tested positive at the beginning of her shift later this same day.

We are also aware other facilities in the area are in outbreak status which is concerning to us. With this being said, all staff and residents will be tested for COVID once a week for at least two weeks. Staff will be required to wear additional protective equipment. Everyone entering the building must be screened in and should not visit if they have any cold-like symptoms.

Our facility works closely with Wapello County Public Health and offers us various recommendations. We also post updates on the facility's website www.vistawoodscarecenter.com. It is important for all of us to be careful out in the community, especially attending larger events. Keeping a mask and hand sanitizer available is our best prevention.

Thank you for your continued support.
